EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Aneesh Mehta (Reg. No. 61,937) on April 20, 2009.

The application has been amended as follows:

Claims:

146. (Currently Amended) A code division multiple access (CDMA) user device comprising:

a CDMA transceiver; and

a controller operable with the CDMA transceiver to establish a packet data communication session over a plurality of layers including a physical layer,

the controller being operable with the CDMA transceiver to facilitate use of a data traffic channel and a control channel during the packet data communication session, wherein the data traffic channel and control channel are associated with CDMA codes and the control channel carries information indicative of a data rate associated with the data traffic channel, the data traffic channel including a plurality of code channels, wherein the control channel is not adapted to carry voice or data traffic,

wherein a state of at least one of the layers other than the physical layer is maintained during the packet data communication session after the data traffic channel has been released, and

wherein the controller controls transmission of packet data on ~~is operable to adjust~~ a number of code channels, wherein the number of code channels is based on an amount of packet data in a packet data queue.

165. (Currently Amended) A code division multiple access (CDMA) user device comprising:

a transmitter;

a receiver; and

a controller operable with the transmitter and the receiver to establish a communication session over a plurality of layers including a physical layer, wherein the controller facilitates use of a traffic channel to carry data or voice and a control channel to carry only information other than data or voice during the communication session, wherein the traffic channel and the control channel are associated with CDMA codes, wherein a state of at least one of the plurality of layers other than the physical layer is maintained during the communication session after the traffic channel and the control channel have been released, and wherein the controller controls transmissions of data on ~~adjusts~~ a number of CDMA codes associated with the traffic channel, wherein the number of CDMA codes is based on an amount of data in a queue.

172. (Currently Amended) The CDMA user device of claim 169 ~~162~~, wherein the CDMA codes are associated with sub-channels.

Abstract:

A base station includes a wireless transceiver for establishing a communication session over a first digital communication path, and a bandwidth management module is connected to the wireless transceiver for allocating at least one code channel within the at least one radio frequency channel for exchanging digital signals over the first digital communication path during the communication session. The at least one code channel may include at least one traffic portion that is established for a predetermined time and at least one control portion that is continuously available. The bandwidth management module may reallocate the at least one traffic portion from the first digital communication path to a second digital communication path if an extension of time is not requested from the base station over the first digital communication path for the at least one traffic portion, or if the base station no longer has digital signals to transmit over the first digital communication path via the at least one traffic portion. However, the at least one reallocated traffic portion appears as though it is still continuously available to the first digital communication path.

(END OF AMENDMENT)

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

With respect to independent claims 146, 165, and 169, the Examiner allows these claims at least for the same reasons discussed in previous Notice of Allowability dated May 19, 2008. Specifically, these claims recite novel subject matter not found in the prior art of record, "...wherein a state of at least one of the layers other than the physical layer is maintained during the packet data communication session after the data traffic channel has been released...", and "...wherein the controller manages, by use of the control channel, a number of CDMA codes during the communication session and wherein a state of at least one of the plurality of layers other than the physical layer is maintained during the communication session when no data, voice, or said control information is being transmitted by the transmitter." Therefore, the Examiner allows these claims at least for this reason in combination with all other limitations recited in claims.

All other claims depend either directly or indirectly upon independent claims 146, 165 and 169 are also allowed at least for the same reasons discussed above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to WAYNE CAI whose telephone number is (571)272-7798. The examiner can normally be reached on Monday-Thursday from 8:00 a.m. to 6:00 p.m.
